Revision System

Private TCO revisions will be issued in consecutive numbers; and each page of the new revision will contain the revision number and the date the revision was issued.

It is the responsibility of all affected personnel to periodically review the *Private Syllabus* to ensure that all current procedures are being followed.

1.1 Aircraft

a. The aircraft that may be used in this course are:

   i. Cessna 172 (4 place)
   ii. Cirrus SR-20 (4 place)
   iii. Piper PA28 (4 place)

b. All aircraft used in this course comply with 14 CFR § 141.39 and must:

   i. Be registered as a civil aircraft of the United States and certified in the standard airworthiness category.
   ii. Be maintained and inspected in accordance with the requirements of 14 CFR Part 91.
   iii. Have engine power controls and flight controls easily accessible and that operate in a normal manner from each pilot station.

1.1.1 Required Aircraft Equipment

a. Transponder with Mode S or Mode C
b. Equipped with ADS-B IN and OUT or OUT
c. MFD and PFD or standard instrument package
d. GPS or ADF

1.2 Personnel

1.2.1 Chief Flight Instructor

The Chief Flight Instructor for this course is designated in WebOPSS paragragh A006. The Chief Flight Instructor meets the requirements outlined in 14 CFR § 141.35.

1.2.2 Assistant Chief Flight Instructors

The Assistant Chief Flight Instructor(s) designated for this course are specified in WebOPSS paragraph A006.

The Assistant Chief Flight Instructor(s) designated for this course must meet the requirements outlined in 14 CFR § 141.36 and will be designated by letter.

1.2.3 Flight Instructors

Each flight instructor assigned to this course must have completed Flight Instructor Training and be the holder of at least a Commercial Pilot Certificate with an Airplane category and Single Engine Land class rating. In addition, each instructor must hold at least a Flight Instructor Certificate with an Airplane category and Single Engine class rating.

1.2.4 Chief Ground Instructor

The Chief Ground Instructor for this course is specified in WebOPSS paragraph A006. The Chief Ground Instructor meets the requirements outlined in 14 CFR § 141.35(e).

Whenever a Chief or Assistant Chief Ground Instructor is either undesignated or unavailable, the appropriate Chief or Assistant Chief Flight Instructor may assume those duties.

1.2.5 Assistant Chief Ground Instructors

The Assistant Chief Ground Instructor(s) designated for this course are specified in WebOPSS paragraph A006.

The designated Assistant Chief Ground Instructor(s) for this course meets the requirements outlined in 14 CFR § 141.36(e) and will be designated by letter.

1.3 Student Information

1.3.1 Course Enrollment

To be enrolled in this course, a student must be at least 16 years of age.

1.3.2 Requirements for Solo Flight

Before you may fly solo, one must hold a Student Pilot Certificate and, at least a Third-Class Medical Certificate. Solo flight operations require specific training, successful completion of a pre-solo knowledge exam, and endorsements from your flight instructor.

1.3.3 Requirements for Graduation

Crewmembers must satisfactorily complete the training outlined in this syllabus and be at least 17 years of age.

1.3.4 Lesson Description and Stages of Training

Each lesson is fully described within the syllabus, including the objectives, standards, and measurable units of accomplishment and learning. The stage objectives and standards are described at the beginning of each stage within the syllabus.

1.3.5 Tests and Checks

The syllabus incorporates stage checks and End of Course Tests in accordance with 14 CFR Part 141. These checks are given by the Chief Instructor, a designated Assistant Chief, or another designated Check Instructor, as appropriate.

1.4 Course Overview

1.4.1 Course Objective

The student will obtain the knowledge, skill, and aeronautical experience necessary to meet the requirements for a Private Pilot Airplane certificate.

1.4.2 Course Completion Standards

The student will demonstrate through written, oral, and flight tests that the knowledge, skill, and experience requirements necessary to obtain a Private Pilot Airplane certificate.

1.4.3 Training Syllabus

The syllabus used will be a combination of the Gleim ground training syllabus and the Acron Aviation Academy Inc. flight training syllabus.

Acron will be utilizing the FAA approved Part 141 Gleim training syllabus, seventh edition, for the Private Pilot Certification Course (Chapter 2 Private Pilot ASEL Ground Syllabus). The flight training syllabus will be the most current revision of the Acron Aviation Academy FAA-approved syllabus (Chapter 3 Private Pilot ASEL Flight Syllabus).

1.4.4 Training Course

The Ground Training Course contains two (2) stages. The Flight Training Course contains three (3) stages.

> **NOTE:** Students enrolled at Jacksonville University and completing a Bachelor of Science Degree in Aviation Management and Flight Operations receive full credit for all Ground School requirements for the following courses: Private ASEL, Instrument Airplane, Commercial Multi-Engine, CFI-A, and CFI-I.

> **NOTE:** Students enrolled in the online Gleim ground school will be credited for the ground school after successful completion and receipt of the graduation certificate.

1.5 Course Introduction

The Private Course utilizes the building-block theory of learning, which recognizes that each item taught must be presented on the basis of previously learned knowledge and skills.

1.5.1 Course Elements

The Private Course utilizes separate flight and ground segments. The course includes the latest FAA pilot certification requirements and a maximum of student oriented instruction. The syllabus and support materials not only provide necessary information, but also guide the student through the course in a logical manner.

1.5.2 Airplane Practice

Airplane practice must be conducted so that the student obtains the maximum benefit from each flight. Prior to each solo flight, an instructor will carefully instruct the student in the maneuvers to be performed during the flight and what is to be accomplished. This guidance will ensure that the student receives maximum benefit from the solo flight.

1.5.3 Use of Flight Training Devices

The Private Course allows, as an option, the use of approved flight training devices for those lessons designated in the Course Time Allocation Table under the Aircraft Type heading. The best results are obtained when a flight training device introduction is accomplished just prior to the flight lesson.

1.5.4 Preflight Briefing

The preflight briefing is an integral part of the learning process. During the preflight briefing, the **PUI** (Pilot under training) firstly briefs the **IP** (Instructor Pilot). During this briefing the **PUI** will brief the **IP** on the possible hazards to the route of flight, review current weather, current personal minimums and any other items of importance. Once the **PUI** has conducted their briefing the **IP** must review the items and challenge the information with specific questions. Once this is complete the **IP** will thoroughly brief the **PUI** on the scenario, and all of the listed tasks and completion requirements. The “Preflight Briefing” should take a minimum of 15 minutes per flight/flight training device event.

1.5.5 Postflight Evaluation

The postflight evaluation is equally as important as the preflight briefing. Each scenario must be thoroughly debriefed, during which time the **PUI** will evaluate their performance and debrief the **IP**. The importance of this “Self Evaluation” is to help the **PUI** learn to be critically honest of their own performance and to learn to come up with possible ways to correct any deficiencies without input from the **IP**. The **IP** will then debrief the **PUI** while emphasizing areas where the **IP** saw deficiencies, or where there was a notable difference in the “Self Evaluation” by the **PUI** and the evaluation of the **IP**. Noticeable advancement should be apparent and recommendations should be made for improvement, where appropriate. This action is a valuable instructional technique because it increases retention and helps to prepare the student for the next lesson. The “Postflight Briefing” should take a minimum of 15 minutes per flight/flight training device event.

1.5.6 Student Stage Checks

Stage checks measure the student's accomplishments during each stage of training. The conduct of each stage check is the responsibility of the Chief Instructor. The authority to conduct these tests may be delegated to an appropriately designated and approved Assistant Chief Instructor or Check Instructor. This procedure provides close supervision of training and another opinion on the student's progress. The stage check also gives the Chief Instructor an opportunity to check the effectiveness of the instructors and their teaching methods.

An examination of the building-block theory of learning will show that it is extremely important for progress and proficiency to be satisfactory before the student enters a new stage of training.

Therefore, the next stage should not begin until the student successfully completes the current stage. Failure to follow this progression may defeat the purpose of the stage check and lead to overall course breakdown.

1.5.7 Ground Training

Acron Aviation Academy will be utilizing the FAA-approved Part 141 Gleim flight and ground training syllabi for the private pilot certification course.

The private pilot materials consist of a ground training syllabus containing 11 ground training lessons which may be conducted as part of a formal ground school, or completed using the Gleim FAA-Approved 141 Online Ground School, in compliance with 14 CFR Part 141, Appendix B, par. 3.

1.5.8 Using the Ground Lessons

Each ground lesson covers the assigned material in the Gleim Private Pilot Knowledge Test Prep book, Gleim Pilot Handbook, or online courseware, answering questions in the corresponding study units from the appropriate Gleim FAA Knowledge Test Prep book or courseware, and review of supporting materials as required as referenced in the syllabus. The program is divided into two (2) stages, each requiring a knowledge test before progressing to the next stage. Upon completion of the 2 stages, there is a comprehensive end-of-course knowledge test. After successful completion of the comprehensive knowledge test, the student may be recommended by our staff, or students completing the Gleim Online Ground School will receive a recommendation from the Gleim Chief Instructor for the FAA private pilot knowledge test (PAR).

1.5.9 Textbooks

Prior to each ground lesson, the student should read and study the appropriate textbook section or chapter, as assigned. The appropriate textbook section or chapter will contain the information necessary to help the student complete the academic stages of the Private Course.

1.5.10 DVD Presentations

Following the ground lesson presentations, the student, as an option, may view DVD presentations. After the DVD presentation, the student should feel free to ask questions and obtain clarification of subject material viewed.

1.5.11 Final Examination

When all appropriate ground lesson presentations are complete, the student must take the Training Course Final Exam. Following the test, the instructor should assign the student review of appropriate subject areas. After a thorough review, the actual FAA Knowledge Test, if applicable, should be taken.

After successful completion of the Gleim Comprehensive knowledge test, the student may be recommended by the Acron Chief Flight Instructor or completing the Gleim Online Ground School will receive a recommendation from the Gleim Chief Instructor for the FAA private pilot knowledge test.

1.5.12 Private Training Course Implementation

The lesson sequence and content have been designed to provide the student with maximum training prior to the introduction of new maneuvers or procedures.

If any deviation from the normal lesson progression is desired, only the Chief Instructor or designated Assistant Chief or Flight Training Manager for the course may grant approval.

> **NOTE:** If the student is completing the ground training and flight training courses concurrently, the instructor must ensure that the student's flight training does not progress faster than the ground training.

1.6 Sanford Facility (SFB)

Acron Aviation Academy's Sanford base is located at the Orlando Sanford International Airport, 2700 Flightline Avenue, Sanford, FL 32773.

1.6.1 Chief and Designated Assistant Chief Flight Instructor

The Chief Flight Instructor for Acron Aviation Academy is designated in WebOPSS paragraph A006.

1.6.2 Airport

The Orlando Sanford International Airport (SFB) is the main operations base for training. The airport has four (4) hard surface runways and meets the requirements of 14 CFR Part 141.38 for day and night flight operations.

A federally operated control tower operates daily between 0630-2300 hours. The airport has ILS, and GPS approaches. Fuel and maintenance services are available daily between 0600-2300 hours.

1.6.3 Training Airports

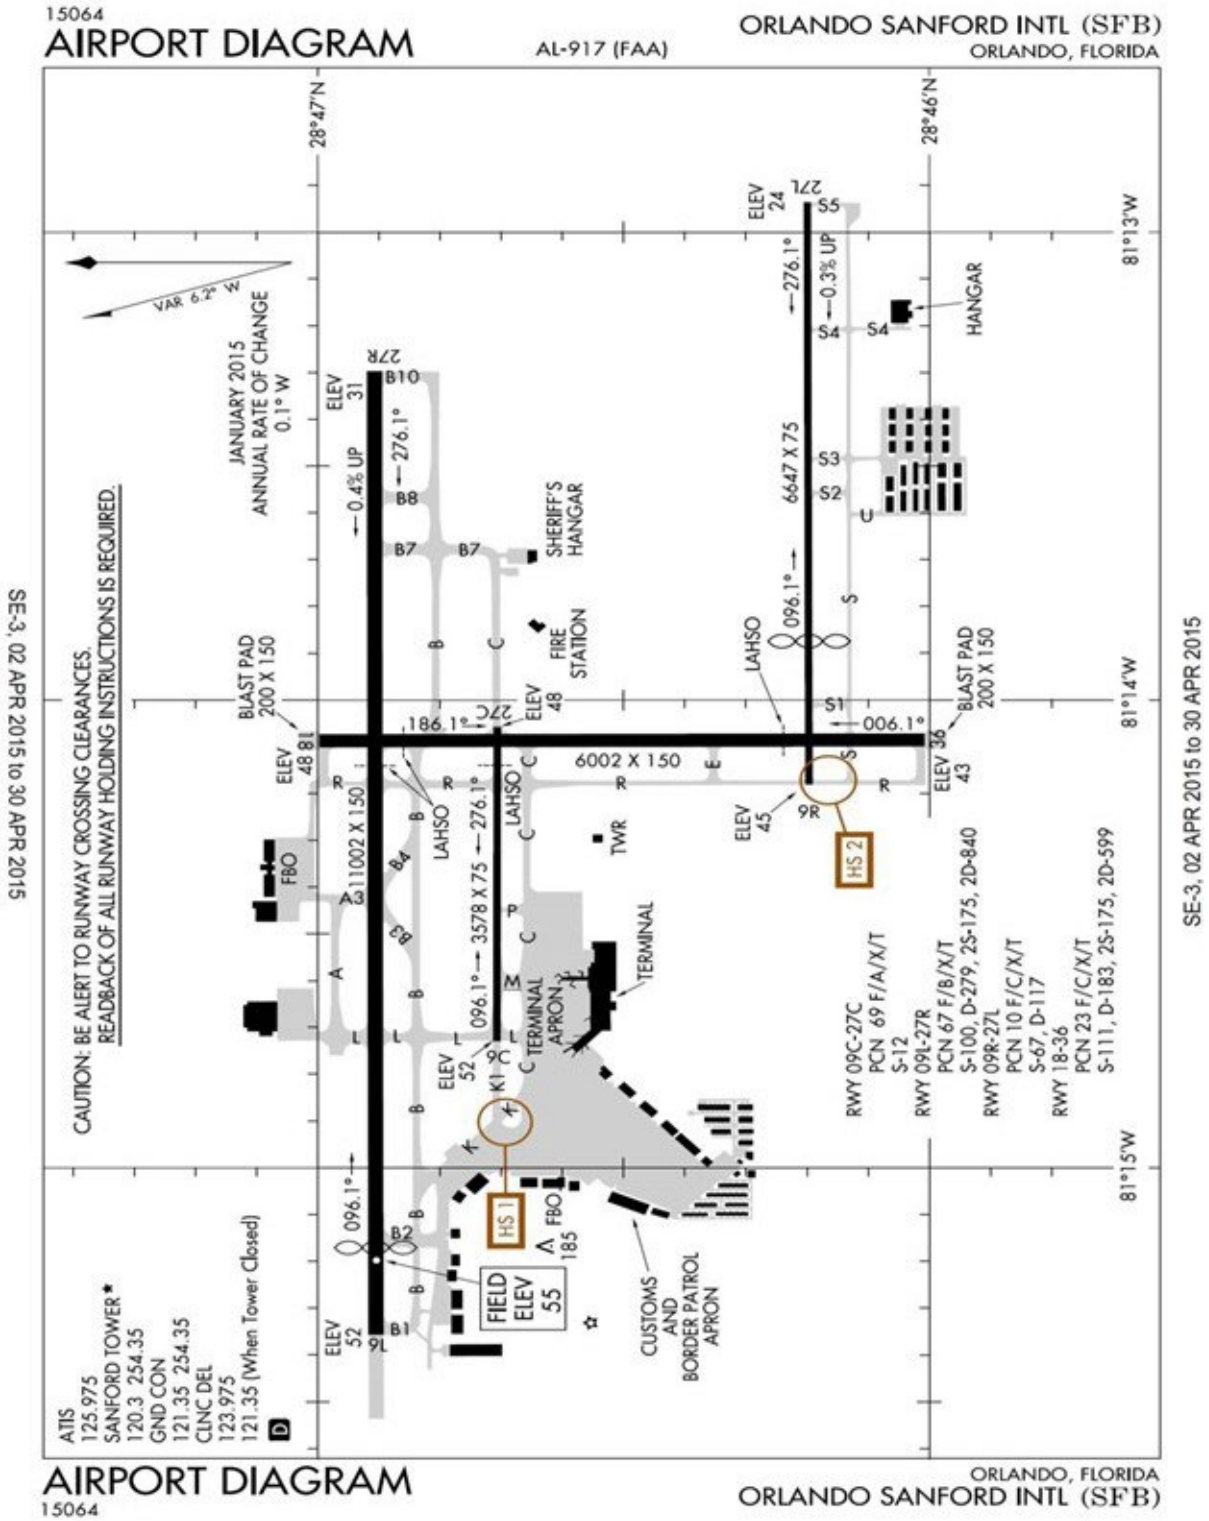
All training airports meet the requirements outlined in 14 CFR § 141.38.

Direction is given to the Academy's flight instructors through an Approved Airports list located in the company operations manual.

The Chief Flight Instructor or designated Assistant Chief Flight Instructor may approve any appropriate public use airport listed in the Chart Supplement.

1.6.4 Sanford Airport Diagram

Note Diagram not current, not to be used to navigation.



1.6.5 Operations Center

Acron Aviation Academy's Operations Center is the focal point for all flight lesson activity. Adequate areas have been provided for preflight briefings, dispatch, and postflight briefings of all flight lesson activities.

The Operations Center includes a Planning Area and Briefing Rooms. The Flight/Ground Briefing Center provides additional space for briefings and small group instruction. Each briefing area is equipped with an erasable marker board as well as tables and chairs to accommodate students and instructors.

1.6.6 Planning Area

This area is equipped with tables and chairs adequate for both students and instructors.

Telephones are available to provide communication to the nearest FAA Flight Service Station. In addition, weather stations are also available for preflight planning purposes.

1.6.7 Sanford Simulator Training Building

Acron Aviation Academy's Simulator Training Building is the focal point for all simulator and flight training device activity. Adequate areas have been provided for AATD and FTD training lessons.

The Simulator Training Building includes Briefing Rooms. Each briefing area is equipped with an erasable marker board as well as tables and chairs to accommodate students and instructors.

> **NOTE:** All rooms and areas conform to local building, sanitation, and health codes. All rooms are designed and located so that students will not be distracted by the instruction conducted in other rooms or by other flight and maintenance operations on the airport.

1.6.8 Academics

The Academics facilities are located in the Academics Building. This building houses classrooms, and the Learning Resource System.

1.6.9 Classrooms

Classrooms are equipped with tables and chairs to accommodate students. Each classroom contains at least one (1) chalkboard or erasable marker board of adequate size and one (1) projection screen.

1.6.10 Learning Resource System

The Learning Resource System (LRS) is equipped with tables and chairs to accommodate students. The LRS is available to students wishing to accomplish additional studying in a group or with a tutor. In addition, the LRS provides computer stations to students wishing to accomplish study using CBT materials, or by the viewing of DVD's.

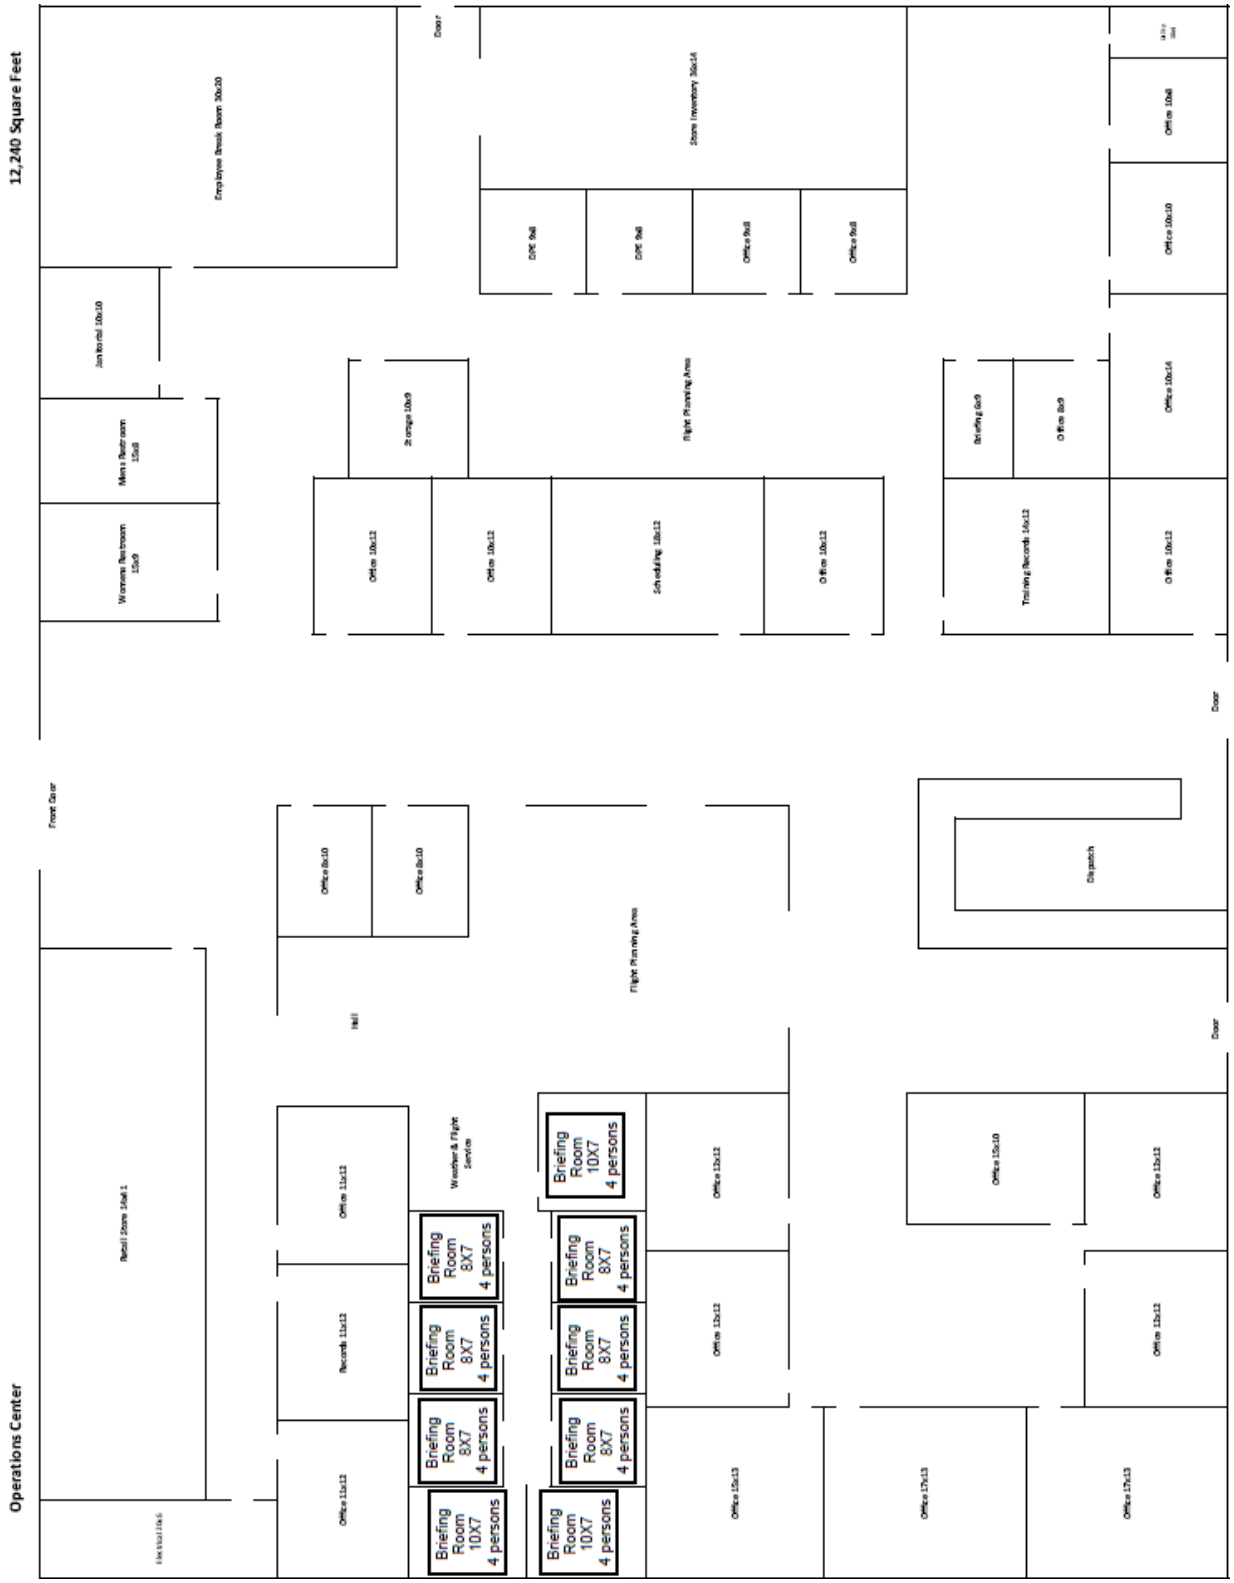
1.6.11 Computer Testing Building

The Computer Testing Building is located at Bldg 41 2749 Flightline Ave, Sanford, FL 32773. The Computer Testing Building has been set aside for the purpose of administering computerized FAA Knowledge Test Examinations.

> **NOTE:** All rooms and areas conform to local building, sanitation, and health codes. All rooms are designed and located so that students will not be distracted by the instruction conducted in other rooms or by other flight and maintenance operations on the airport.

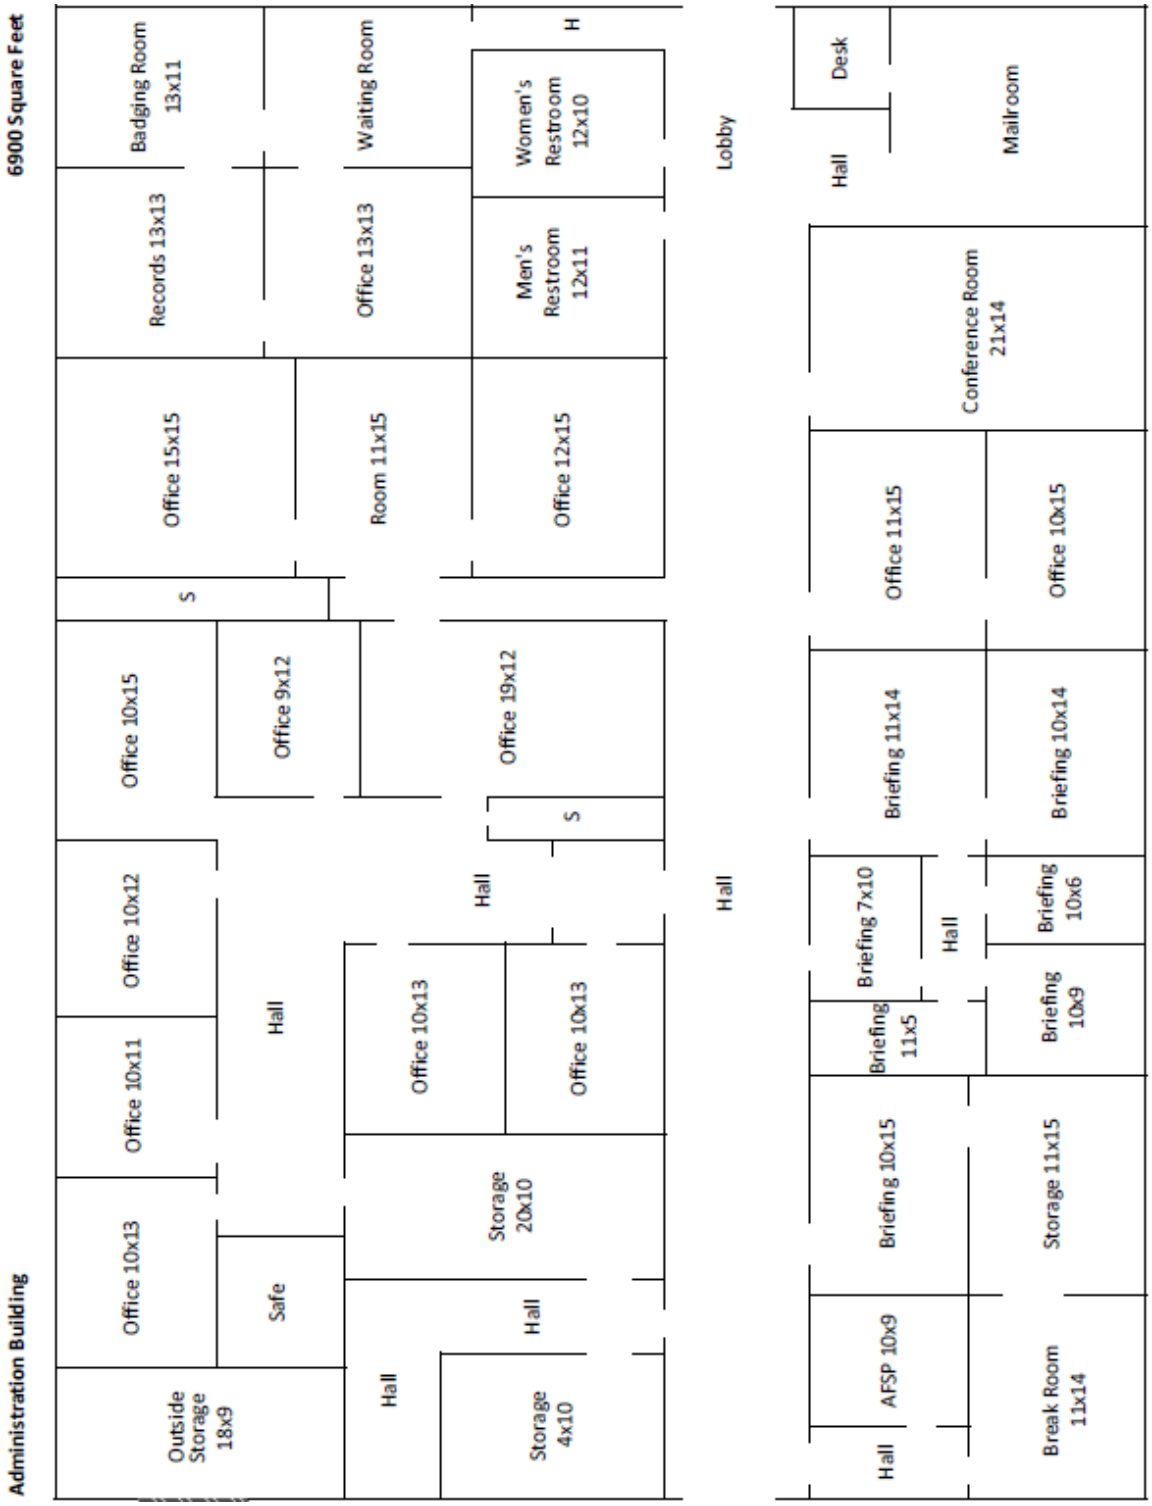
1.6.12 Building Diagrams

1.6.12.1 Sanford Operations Building

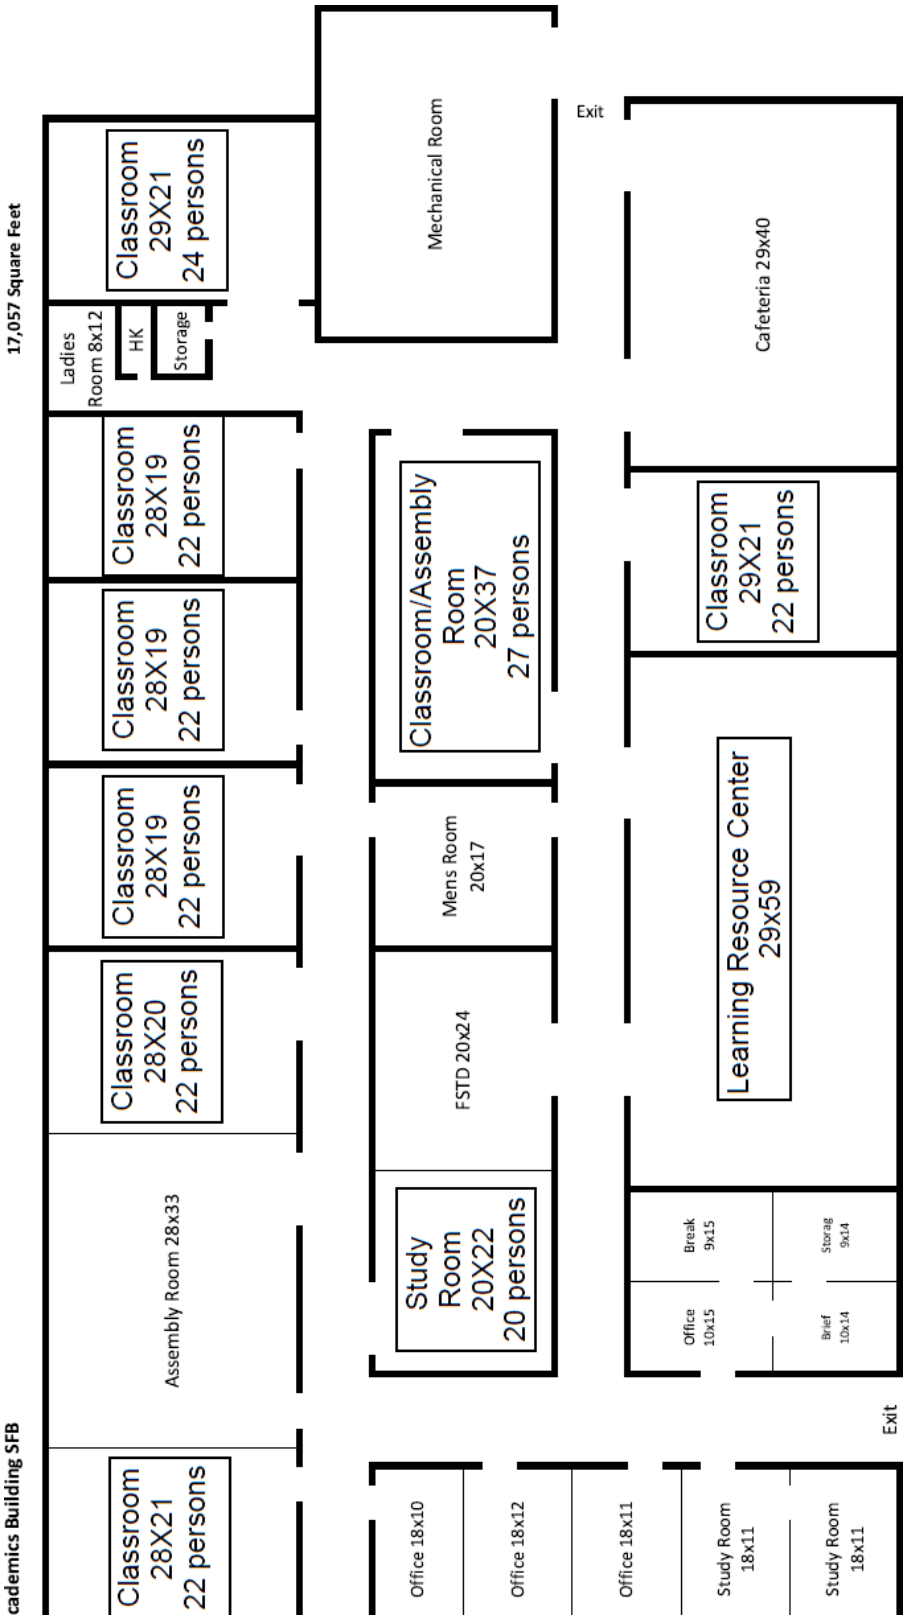


1.6.12.2 Sanford Administration Building

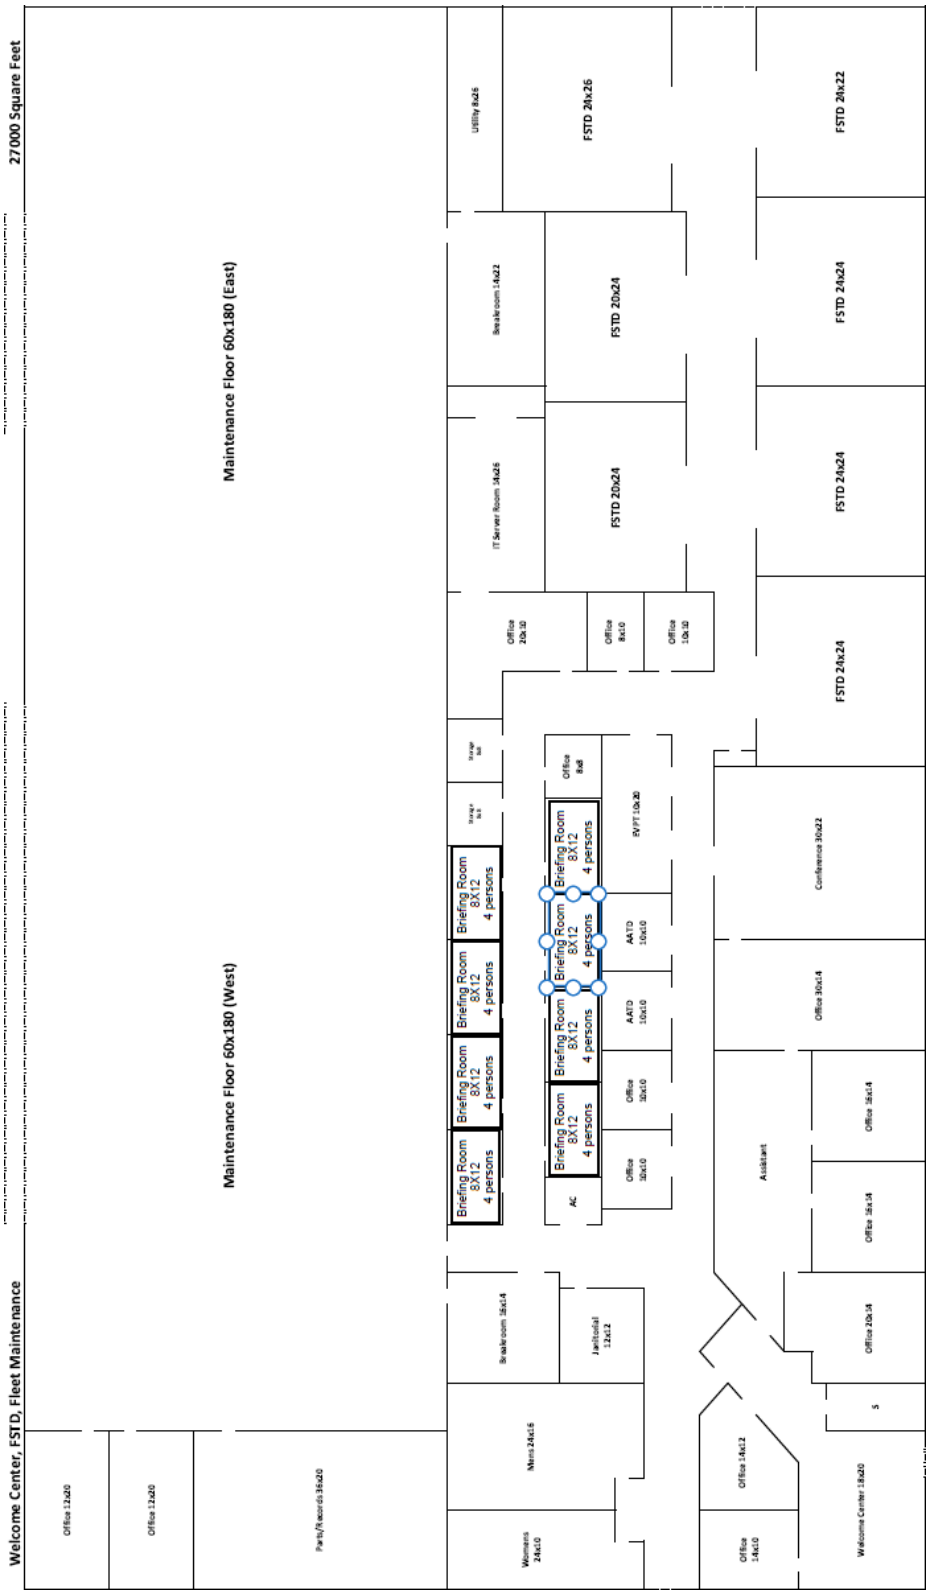
*NOTE*Building currently not in use for academy training.



1.6.12.3 Sanford Academics Building

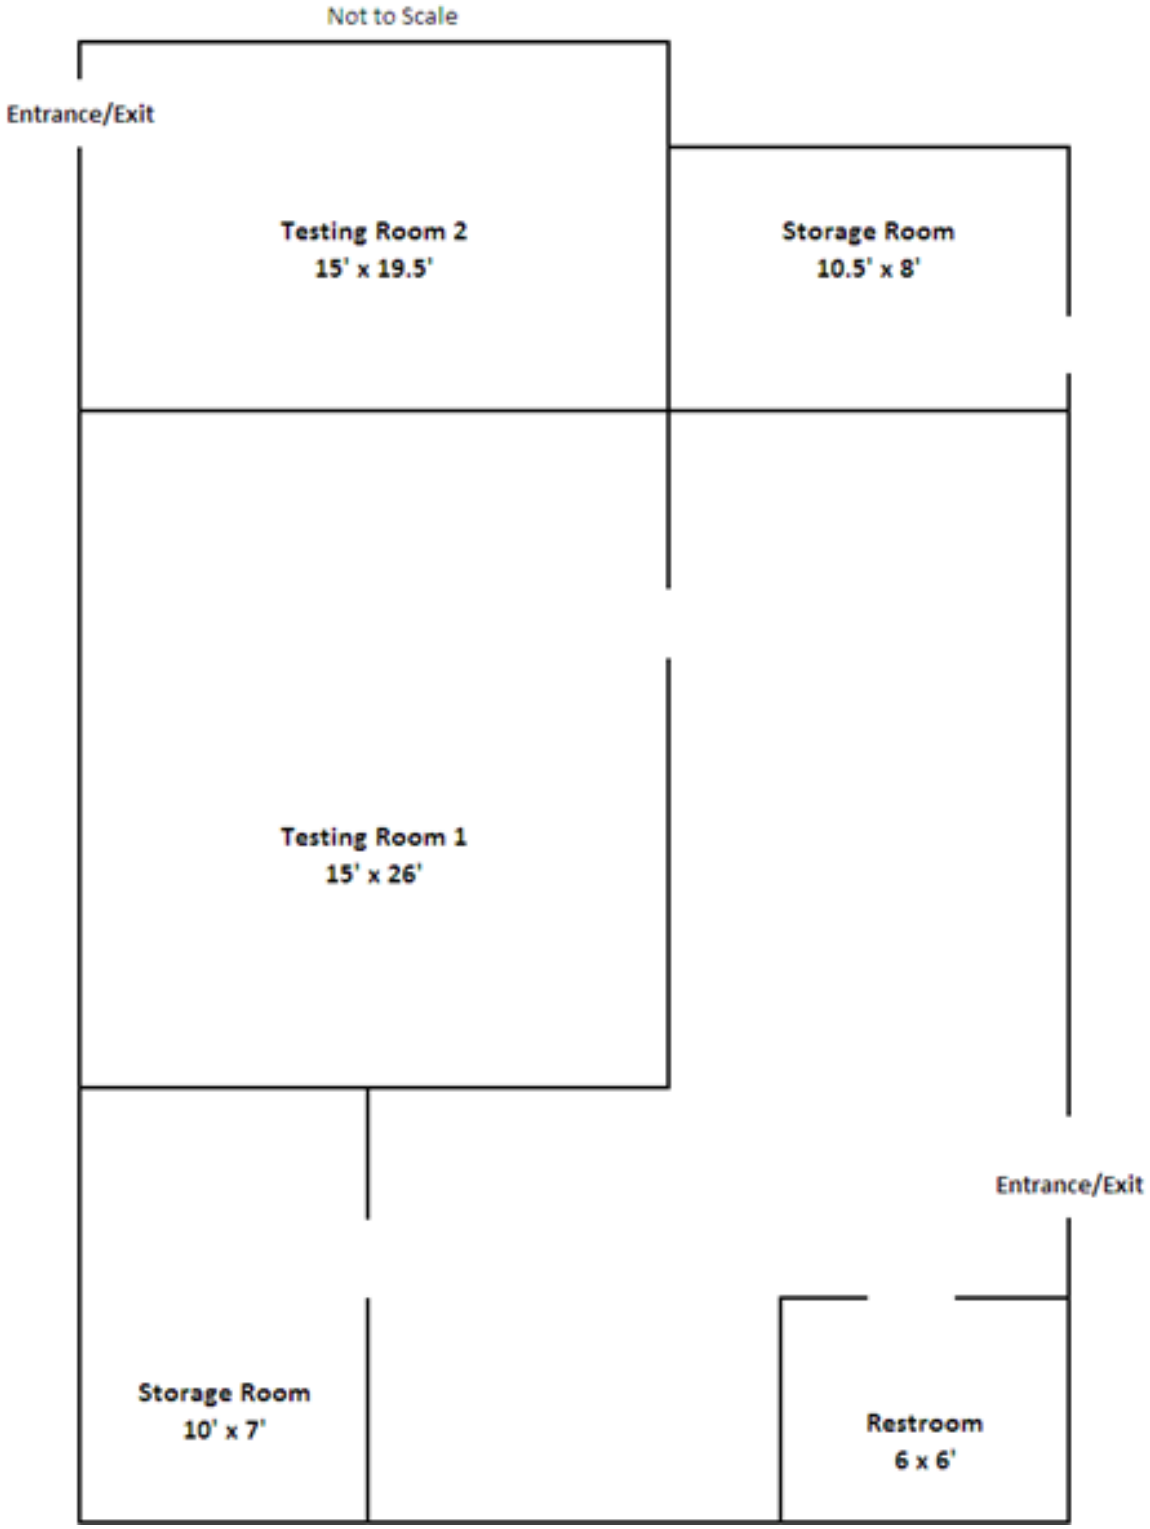


1.6.12.4 Sanford Simulator Training Building



1.6.12.5 Sanford Computer Testing Building

*NOTE*Testing room 1 contains 10 testing stations as set by PSI standards.



1.6.13 Equipment

1.6.13.1 Ground Training Aids

The training aids available for use, as appropriate, are as follows:

a. Audiovisual Aids

- Computers with projectors, overhead projectors, Interactive Smart Boards, Diagrams and Charts

b. Mockups

- Large, presentation-type, E6B flight computer and Cockpit Procedures Trainer

c. Aircraft Components

- Flight instruments and aircraft engines on stands

In addition, for enhancement and reinforcement of training a variety of video tapes and computer-based training is available.

1.6.13.2 Flight Training Devices

The Academy's flight training devices/approved aviation training devices meet the requirements specified in 14 CFR § 141.41 (b)/14 CFR § 141.41 (c) respectively, and 14 CFR Part 60. These devices may be used to meet the total simulated flight time allowed in 14 CFR Part 141, Appendices B through G and Appendix I.

a. The Aerosim-Mechtronix Level 6 flight training device (FTD) is an enclosed stationary trainer equipped with an exact replica of the aircraft that meets FAA Level 6 certification criteria. It is equipped with the engine instruments and controls necessary for operating a Technically Advanced, single engine Airplane (TAA). All of the required equipment for VFR and IFR flight as per 14 CFR § 91.205 (b) and (d) is provided or simulated.
b. Aerosim-Mechtronix Advanced Aviation Training Device (AATD). The Aerosim Model Aviator 100 Single Engine Land is a stationary trainer equipped with the necessary flight controls to simulate flight around the three axis of an airplane. It is equipped with the engine instruments and controls necessary for operating a Technically Advanced, single engine Airplane (TAA). All of the required equipment for VFR and IFR flight as per 14 CFR § 91.205 (b) and (d) is provided or simulated.
c. The Frasca International Inc. TruFlite Training Device (AATD) is a stationary trainer equipped with the necessary flight controls to simulate flight around the three axis of an airplane. It is equipped with the engine instruments and controls necessary for operating a Technically Advanced, single engine Airplane (TAA). All of the required equipment for VFR and IFR flight as per 14 CFR § 91.205 (b) and (d) is provided or simulated.
d. The Redbird MCX Advanced Aviation Training Device (AATD) is a stationary trainer equipped with the necessary flight controls to simulate flight around the three axis of an airplane. It is equipped with the engine instruments and controls necessary for operating a Technically advanced, single and multi-engine Airplane (TAA). All of the required equipment for VFR and IFR flight as per 14 CFR § 91.205 (b) and (d) is provided or simulated.
e. The Frasca International Inc. RTD Training Device (AATD) is a stationary trainer equipped with the necessary flight controls to simulate flight around the three axis of an airplane. It is equipped with the engine instruments and controls necessary for operating a Technically Advanced, single engine Airplane (TAA). All of the required equipment for VFR and IFR flight as per 14 CFR § 91.205 (b) and (d) is provided or simulated.

1.7 Jacksonville Facility (CRG)

Acron Aviation Academy's Jacksonville satellite base is located at the Jacksonville Executive At Craig Airport, 793 Amelia Earhart Drive, Jacksonville, FL 32225.

1.7.1 Chief and Designated Assistant Chief Flight Instructor

The Chief Flight instructor for Acron Aviation Academy is designated in WebOPSS paragraph A006. The designated Assistant Chief Flight Instructor for the Jacksonville Base is specified in WebOPSS paragraphs A006 and B050.

1.7.2 Airport

The Jacksonville Executive At Craig Airport (CRG) is the satellite base's main location for training. The airport has two (2) hard surface runways and meets the requirements of 14 CFR Part 141.38 for day and night flight operations.

An FAA contract control tower operates between 0600-2300 Monday through Friday and 0700-2200 Saturday and Sunday.

The airport has ILS, VOR and GPS approaches.

Fuel service is available from 0600-2200 hours daily. Maintenance service is available full time from 600-1900 (M-F), 0900-1700 (Saturday) and on call other times.

1.7.3 Training Airports

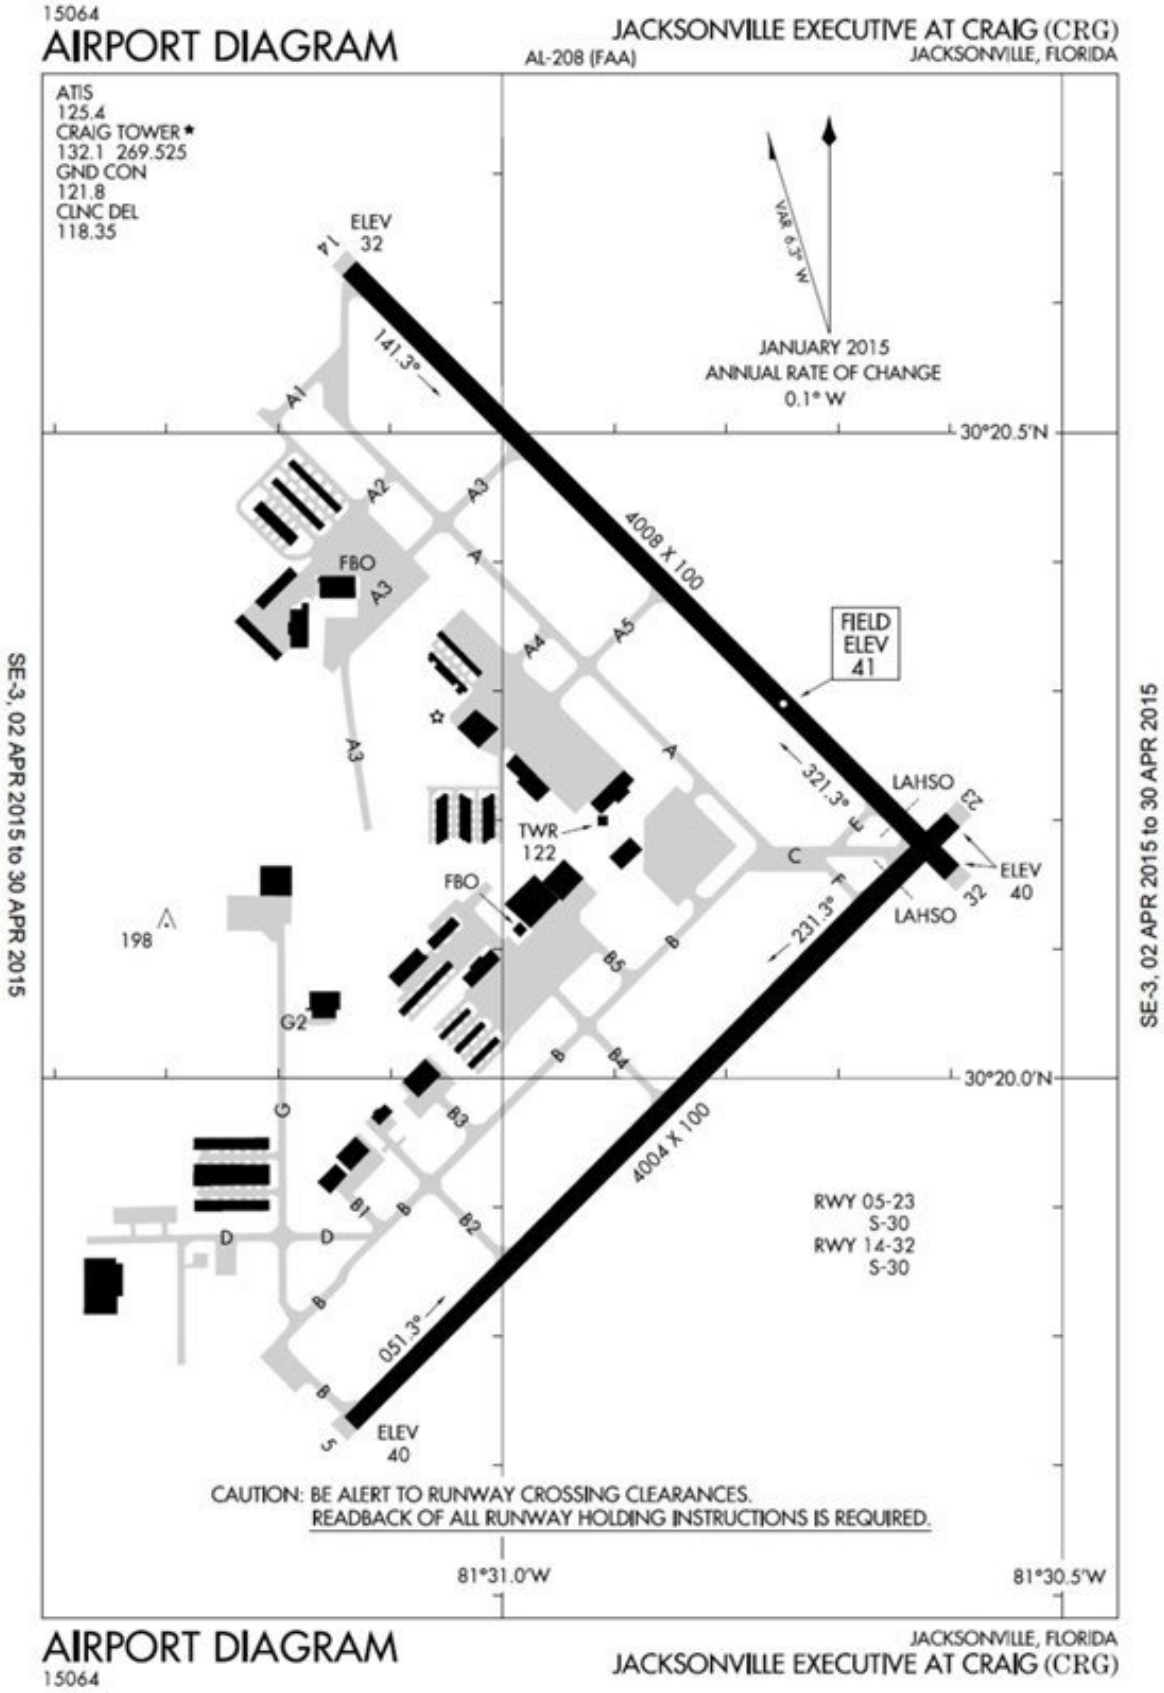
All training airports meet the requirements outlined in 14 CFR § 141.38.

Direction is given to the Academy's flight instructors through an Approved Airports list in supplemental documentation.

The Chief Flight Instructor or designated Assistant Chief Flight Instructor may approve any appropriate public use airport listed in the Airport/Facilities Directory.

1.7.4 Jacksonville/Craig Airport Diagram

NOTE Diagram not current and not to be used for navigation.



1.7.5 Operations Center

Acron Aviation Academy's Operations Center is the focal point for all flight lesson activity. Adequate areas have been provided for the dispatch and recovery of all flight lesson activity.

The Operations Center has adequate Pre-Post Flight Briefing Areas.

1.7.6 Pre/Post Flight Briefing Areas

Briefing Rooms 1 and 2 are equipped with tables and chairs adequate for both students and instructors. Briefing Room 1 may accommodate up to 16 students. Briefing Room 2 may accommodate up to 8 students. Briefing Room 2 may be reserved for FAA practical test oral examinations and stage checks as needed. All briefing areas are also equipped with erasable marker boards.

A telephone is available to provide communication to the nearest FAA Flight Service Station.

1.7.7 Simulator Hall

The Jacksonville facility has aSimulator Hall. The Sim Hall includes AATD simulators.

1.7.8 Equipment

1.7.8.1 Ground Training Aids

The training aids available for use, as appropriate, are as follows:

a. Audiovisual Aids

- Computers, Diagrams and Charts

b. Mockups

- Cockpit Procedures Trainer

c. Aircraft Components Flight instruments

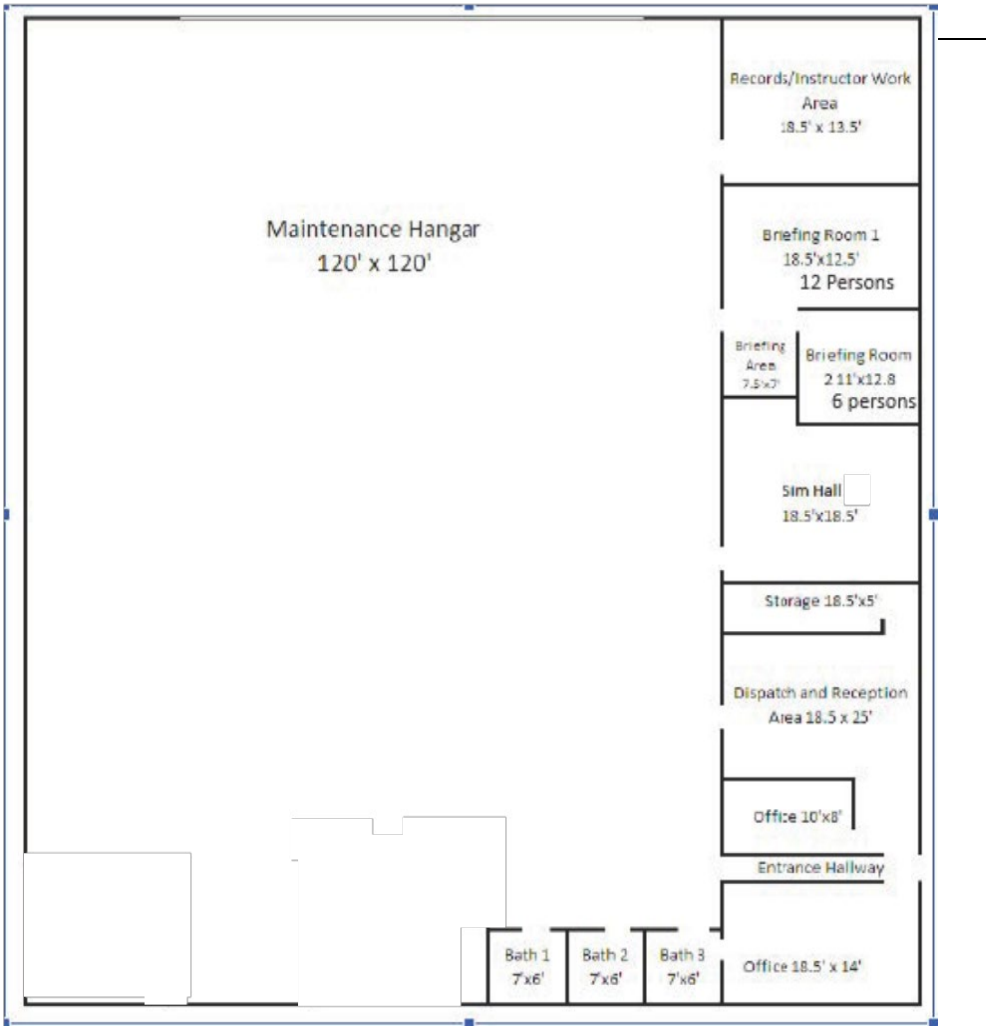
In addition, for enhancement and reinforcement of training a variety of video tapes and computer-based training is available.

1.7.8.2 Flight Training Devices

The Academy's flight training devices/approved aviation training devices meet the requirements specified in 14 CFR § 141.41 (b)/14 CFR § 141.41 (c) respectively, and may be used to meet the total simulated flight time allowed in 14 CFR Part 141, Appendices B through G and Appendix I.

The Frasca International Inc. RTD Training Device (AATD) is a stationary trainer equipped with the necessary flight controls to simulate flight around the three axis of an airplane. It is equipped with the engine instruments and controls necessary for operating a Technically Advanced, single engine Airplane or multi engine (TAA). All of the required equipment for VFR and IFR flight as per 14 CFR 91.205 (b) and (d) is provided or simulated.

1.7.8.3 Operations Center Diagram



1.7.8.4 Academics

The Academics facilities are located on the campus of Jacksonville University at 2800 University Blvd. N., Jacksonville, FL 32211.

1.7.8.5 Classrooms

Classroom D-153 in the Davis College of Business Building may accommodate 41 students. Depending on the size of the class and the scheduling needs of the college other rooms may be assigned.

1.7.8.6 Ground Training Aids

a. PC/DVD/Internet with overhead projection capability
b. Computer-based training
c. Flight instruments
d. Static displays of aircraft engines and parts Aircraft models
e. GiantE6B White board

NOTE: All rooms and areas conform to local building, sanitation, and health codes. All rooms are designed and located so that students will not be distracted by the instruction conducted in other rooms or by other flight and maintenance operations on the airport.

2.1 Private Pilot Course Objective

The objective of this course is to introduce the Pilot Under Instruction (PUI) to the Private ASEL aviation-training environment. The PUI will study all aeronautical knowledge areas required for a Private ASEL Certificate.

a. The Instructor will conduct training using the following equipment:

   i. Classroom
   ii. Computer Projector
   iii. Whiteboard

b. Reference Textbooks for this course include (Not all inclusive):

14 CFR 1	AFM	POH/AFM
AC 60-28	FAA-H-8083-3	NOTAMS
AC 61-136	FAA-H-8083-15	
AC 91-74	FAA-H-8083-16	
AC 91.21-1	FAA-H-8083-25	
AC 120-108	FAA-ACS	

2.2 Private Pilot Course Completion Standards

At the completion of this course, the PUI will demonstrate to the Instructor a basic understanding of all aeronautical knowledge areas required for a Private ASEL Certificate. The PUI will be able to accomplish the objectives of the course to the appropriate level of performance, as outlined in the examination completion standards.

Upon successful completion of the ground training syllabus, the student must complete the FAA knowledge exam for the Private Pilot Certificate. Students who have completed the exam prior to enrollment will not have to retake the exam, provided the test report is still valid.

> **NOTE:** All references in the Gleim syllabus pertaining to the Gleim flight syllabus are not applicable. The Acron Aviation training syllabus (Chapter 3) is the syllabus used.

2.3 Gleim Ground Syllabus Private Pilot

The Gleim Ground Syllabus for Private Pilot can be found in the Gleim Private Pilot Knowledge Test Prep book or in the on-line course ware (login info will be provided by the academy.)

Revision System

Private Pilot Certification Course (ASEL) Syllabus course revisions will be issued in consecutive numbers and each page of the new revision will contain the revision number and the date the revision was issued.

It is the responsibility of all affected personnel to periodically review the *Private Pilot Certification Course (ASEL) Syllabus* to ensure that all current procedures are being followed.

FLIGHT TRAINING	AIRCRAFT TRAINING	DUAL INSTRUCTION	AIRCRAFT SOLO
35.0	30.0	20.0	5.0
CROSS COUNTRY DUAL	**NIGHT DUAL**	**NIGHT TO/LANDINGS**	**INSTRUMENT TRAINING**
3.0	3.0	10.0	3.0

3.2 Stage 1

3.2.1 Stage Objective

During this first stage the student obtains the foundation for all future aviation training. The student becomes familiar with the training airplane and learns how the flight controls are used to establish and maintain specific flight attitudes. Through the introduction of new maneuvers and review, the student will gain proficiency to operate in the local training area and traffic pattern.

The **PUI** will conduct training in the following equipment as applicable:

a. Advanced Aviation Training Device (**AATD**)
b. Flight Training Device (**FTD**)
c. Technical Advanced Airplane
d. Single Engine Airplane

3.2.2 Stage Completion Standards

At the completion of this stage, the student will demonstrate an understanding of the basic flight maneuvers introduced. The student will understand how to maintain specific flight attitudes and ground tracks. Also, the student will be prepared to solo in the local area and have the proficiency required for introduction to maximum performance takeoff and landing procedures.

> **NOTE:** In the event an **AATD/FTD** is not available, the training event prescribed can be conducted in the aircraft with the approval from the Chief Instructor/Asst. Chief or designee.

3.2.3 Lesson 1 – GB

3.2.3.1 Equipment

Briefing Room

3.2.3.2 Lesson Objective

This lesson will introduce the student to tasks that must be completed before each flight.

3.2.3.3 Lesson Content

Training Records Identity Verification Copy Photo Identification Copy Pilot Certificate Copy Medical Certificate Create Training Folder Verify TSA Clearance (if Applicable)	
Stage Goals & Objective Stage 1 Overview	 Introduction
Publications Acron Operations Manual Acron Aviation Standardizations Manual Training Course Outline	 Introduction Introduction Introduction

3.2.4.4 Completion Standards

Student understanding will be measured by the instructor using Oral Questioning, and correcting all incorrect answers, prior to continuing to the next lesson.

3.2.5 Lesson 3 – DL

3.2.5.1 Equipment

S.E. AIRPLANE

3.2.5.2 Lesson Objectives

The student pilot will be introduced to flying the airplane and emphasis will be placed on a basic understanding of how to control the airplane in straight and level flight.

3.2.5.3 Lesson Content

Cockpit Familiarization Flight Controls Engine Controls	 Introduction Introduction
Preflight Procedures Preflight Inspection	 Introduction
Engine Start General Starting Procedures	 Introduction
Taxi Operations Taxiing	 Introduction
Before Takeoff Check Before Takeoff Check	 Introduction
Runway Incursion Avoidance Runway Incursion Avoidance	 Introduction
Straight-and-Level Flight Straight-and-Level Flight	 Introduction
Checklist Usage Normal Procedures Checklist	 Introduction
Approach and Landing Procedures Normal and/or Crosswind Landing	 Introduction
Postflight Operations After Landing Parking Aircraft Securing Aircraft	 Introduction Introduction Introduction
Positive Aircraft Control	Introduction
Additional Areas As Assigned by Instructor (If Necessary)	

3.2.5.4 Completion Standards

At the completion of this lesson, the student will have gained an introductory knowledge of the aircraft systems. In addition, the student will become familiar with the aircraft control systems and how they are used to maneuver the airplane on the ground and in the air. Takeoffs and landings will be completed with instructor assistance.

3.2.6 Lesson 4 – TD

3.2.6.1 Equipment

AATD/FTD

3.2.6.2 Lesson Objective

During this lesson, the student will continue to learn new tasks when flying the airplane. Emphasis will be placed on maintaining straight and level flight, with the introduction of trim and level turns. Additionally the student will continue to be introduced to the normal and/or crosswind approach and landing.

3.2.6.3 Lesson Content

Cockpit Familiarization Flight Controls Engine Controls	 Review Review
Preflight Procedures Preflight Inspection	 Review
Engine Start General Starting Procedures	 Review
Taxi Operations Taxiing	 Review
Before Takeoff Check Before Takeoff Check	 Review
Runway Incursion Avoidance Runway Incursion Avoidance	 Review
Straight-and-Level Flight Straight-and-Level Flight Use of Trim	 Review Introduction
Turns Level Turns	 Introduction
Checklist Usage Normal Procedures Checklist	 Review
Approach and Landing Procedures Normal and/or Crosswind Approach procedures	 Introduction
Postflight Operations After Landing Parking Aircraft Securing Aircraft	 Review Review Review
Positive Exchange of Flight Controls Positive Aircraft Control	Introduction Review
Additional Areas As Assigned by Instructor (If Necessary)	

3.2.6.4 Completion Standards

At the completion of this lesson, the student will be able to maintain straight and level flight. The student will display an increased understanding and proficiency in coordinated airplane attitude control. In addition, the student should be familiar with the control usage necessary to maintain altitude within ± 300 feet, heading within ± 30°, and airspeed ±20 kts. Landings will be completed safely with Instructor assistance.

3.2.7 Lesson 5 – DL

3.2.7.1 Equipment

S.E. AIRPLANE

3.2.7.2 Lesson Objective

During this lesson the student will review basic flight. Emphasis should be placed on maintaining straight and level flight with the use of trim.

3.2.7.3 Lesson Content

3.2.7.4 Completion Standards

At the completion of this lesson, the student will be able to maintain straight and level flight unassisted. The student will display an increased understanding and proficiency in coordinated airplane attitude control. In addition, the student should be familiar with the control usage necessary to maintain altitude within ± 300 feet, heading within ± 30°, and airspeed ±20 kts.

3.2.8 Lesson 6 – TD

3.2.8.1 Equipment

AATD/FTD

3.2.8.2 Lesson Objective

During this lesson, the student will continue to learn new tasks when flying the airplane. The student will be introduced to climbs, descents, and turns using different power settings. Additionally the student will be introduced to flight by reference to instruments. Emphasis will be placed on maintaining straight and level flight while using trim and level turns.

Additional Areas As Assigned by Instructor (If Necessary)	

3.2.8.4 Completion Standards

At the completion of this lesson, the student will be able to maintain straight and level flight with the use of trim and able to make level turns. The student will display an increased understanding and proficiency in coordinated airplane attitude control. In addition, the student should be familiar with the control usage necessary to maintain altitude within ± 300 feet, heading within ± 30°, and airspeed ±20 kts for all flight maneuvers.

3.2.9 Lesson 7 – GB

3.2.9.1 Equipment

Briefing Room

3.2.9.2 Lesson Objective

During this ground brief, the student will be introduced to aircraft systems and weather observations and forecasts as it would relate to a local VFR flight.

3.2.9.3 Lesson Content

Operation of Systems

3.2.11.4 Completion Standards

The student will understand the coordinated control inputs required to maintain a specific ground track. In addition, the student will maintain altitude within ± 200 feet and headings within ± 20° during straight-and-level flight. Normal taxiing will be performed without instructor assistance. Takeoffs, landings and go-arounds will be performed with minimal instructor assistance and held to -100 to + 700 feet within a specified touchdown point. While performing BAI training, the student will maintain ±300 feet altitude, ±30° heading, and ±20 kts.

3.2.12 Lesson 10 – TD

3.2.12.1 Equipment

AATD/FTD

3.2.12.2 Lesson Objective

During this lesson, the student will continue to learn new tasks when flying the airplane. The student will be introduced to slow flight and stalls. Emphasis will be placed on maintaining straight and level flight while using trim and level turns as well as procedures.

3.2.13.4 Completion Standards

The student should demonstrate increased skill in instrument scan and interpretation during instrument flight. The student should perform unassisted takeoffs; however, landings and go-arounds should be performed with minimal instructor assistance with -0 to +600 feet from specified touchdown point to be maintained. In addition, altitude should be maintained within ± 200 feet, heading within ± 15°, and airspeed within ± 15 knots. During BAI training, the student will maintain ±300 feet altitude, ±30° heading, and ±20 kts airspeed.

3.2.14 Lesson 12 – DL

3.2.14.1 Equipment

S.E. AIRPLANE

3.2.14.2 Lesson Objective

During this lesson the student will be introduced to traffic pattern operations and emergency operations. Situations requiring the student to execute emergency/abnormal procedures may be presented by the Flight Instructor at any time during the lesson.

3.2.14.4 Completion Standards

The student should demonstrate increased skill in instrument scan and interpretation during instrument flight. Normal takeoffs shall be done without any physical instructor assistance; however, landings and go-arounds may be performed with minimal instructor assistance and kept within -0 to +600 feet of a specified touchdown point. In addition, altitude should be maintained within ± 200 feet, heading within ± 15° and airspeed within ± 10 knots during visual operations. During basic instrument maneuvers, the student shall maintain positive control of the aircraft at all times and maintain altitude within ± 300 feet, heading within ± 30° and airspeed within ± 20 knots.

3.2.15 Lesson 13 – DL

3.2.15.1 Equipment

S.E. AIRPLANE

3.2.15.2 Lesson Objective

During this lesson the student will practice takeoffs and landings to gain proficiency and build confidence for flight in the traffic pattern.

3.2.15.4 Completion Standards

The student shall demonstrate correct radio communications and traffic pattern procedures at an airport. In addition, the student will demonstrate the proper takeoff and landing techniques utilizing proper crosswind corrections with very minimal instructor input on landings in order to maintain -0 to + 600 feet of a specified touchdown point. In addition, altitude should be maintained within ± 200 feet, heading within ± 15° and airspeed within ± 10 knots during visual operations. During basic instrument maneuvers, the student shall maintain positive control of the aircraft at all times and maintain altitude within ± 300 feet, heading within ± 30° and airspeed within ± 20 knots.

3.2.16 Lesson 14 – DL

3.2.16.1 Equipment

S.E. AIRPLANE

3.2.16.2 Lesson Objective

During this lesson the student will practice the listed maneuvers to gain proficiency in the traffic pattern.

3.2.16.4 Completion Standards

The student shall demonstrate the ability to recognize and recover from full stalls and perform all takeoffs and most landings with minimal to no instructor assistance in order to maintain -0 to +600 feet of a specified touchdown point. In addition, the student should maintain altitude within ± 150 feet, airspeed ± 10 knots and heading within ± 15°.

3.2.17 Lesson 15 – DL

3.2.17.1 Equipment

S.E. AIRPLANE

3.2.17.2 Lesson Objective

During this lesson the student will practice the listed maneuvers to gain proficiency in the traffic pattern and prepare for the stage check flight. The student will plan a flight in the local area while using pilotage to maintain situational awareness.

3.2.19.4 Completion Standards

This lesson and Stage I are complete when the student can competently perform preflight duties and all other procedures necessary for the safe conduct of a solo flight in the local traffic pattern. During landings, the student will maintain -0 to +600 feet of a specified touchdown point. Altitude during visual operations will be maintained within ± 150 feet, headings within ± 15° and airspeed within ± 10 knots. During basic instrument operations the student shall maintain positive control of the aircraft at all times and maintain altitude within ± 250 feet, heading within ± 25º and airspeed within ± 15 knots.

3.3 Stage 2

3.3.1 Stage Objective

This stage allows the student to expand the skills learned in the previous stage. The student is introduced to maximum performance takeoff and landing procedures. Greater emphasis is placed on attitude controlled by instrument reference to increase the student's skill and safety. This stage also introduces the student to night flying and cross-country operations in preparation for solo flights. The student will learn to plan and conduct cross-country flights using pilotage, dead reckoning, and radio navigation.

The student will conduct training in the following equipment as applicable:

a. Advanced Aviation Training Device (**AATD**)
b. Flight Training Device (**FTD**)
c. Technical Advanced Airplane
d. Single Engine Airplane – Land

3.3.2 Stage Completion Standards

The student will demonstrate proficiency to the standard of performance outlined in the current FAA Private Pilot Airman Certification Standards.

> **NOTE:** In the event an **AATD/FTD** is not available, the training event can be conducted in the aircraft with the approval from the Chief Instructor/Asst. Chief or designee.

3.3.3 Lesson 18 – DL

3.3.3.1 Equipment

S.E. AIRPLANE

3.3.3.2 Lesson Objective

During this lesson the student will be introduced to short and soft-field takeoffs and landings. The student will practice the listed maneuvers to gain proficiency and to prepare for the student's first solo in the traffic pattern.

3.3.4.4 Completion Standards

The student will demonstrate a solid knowledge of the elements related to short and soft-field takeoffs and landings as well as be able to demonstrate the correct procedures with little instructor guidance and maintain -0 to +400 feet of a specified touchdown point for short field landings. In addition, the student will demonstrate a basic knowledge of the elements related to VOR/Navaid navigation. In addition, the student should maintain altitude within ± 150 feet, airspeed ± 10 knots and heading within ± 15°.

3.3.5 Lesson 20 – DL

3.3.5.1 Equipment

S.E. AIRPLANE

3.3.5.2 Lesson Objective

During this lesson the student will practice short and soft-field takeoffs and landings to gain proficiency and confidence. In addition, the Flight Instructor will present situations requiring the student to fly solely by reference to instruments. Situations requiring the student to execute emergency/abnormal procedures may be presented by the Flight Instructor at any time during the lesson.

3.3.7.4 Completion Standards

The student will demonstrate a solid knowledge of the elements related to night operations. The student should complete at least five (5) night takeoffs and landings to a full stop at the conclusion of this lesson. The student will demonstrate proficiency in the maneuvers listed above held to the FAA Private Pilot Airman Certification Standards.

3.3.8 Lesson 23 – GB

3.3.8.1 Equipment

Briefing Room

3.3.8.2 Lesson Objective

During this lesson the student will be introduced to VFR cross-country flight planning in preparation for the student's first cross-country flight. The student and Flight Instructor will plan a cross-country from your home airport to an airport at least 50 nm away.

3.3.8.3 Lesson Content

VFR Cross-Country Planning Plan Cross-Country Cross-Country Navigation Log	 Introduction Introduction
Aeronautical Decision Making (ADM) Airworthiness - Maintenance Logbook	Review Introduction
Additional Areas As Assigned by Instructor (If Necessary)	

3.3.8.4 Completion Standards

At the completion of this lesson, the student will have gained knowledge of cross-country flight planning and be able to plan future cross country flights with little to no instructional assistance.

3.3.9 Lesson 24 – DXC

3.3.9.1 Equipment

S.E. AIRPLANE

3.3.9.2 Lesson Objective

During this lesson the student is introduced to cross-country procedures and techniques and uncontrolled airport operations. Situations requiring the student to execute emergency/abnormal procedures may be presented by the Flight Instructor at any time during the lesson.

The student will plan and execute a VFR cross country flight to an airport more than 50 nm away from the point of origin.

3.3.9.4 Completion Standards

The student will demonstrate the skill to perform cross-country flights safely and operate at uncontrolled fields using proper techniques. This includes accurate and complete preflight planning, weather analysis, use of FAA publications and charts, and adherence to the preplanned flight. The student should understand the use of pilotage, dead reckoning, radio navigation, and diversion procedures. Altitude should be controlled within 200 feet and heading within ± 15° and airspeed within ± 10 kts on the navigation operations. Takeoffs and Landings will be held to the appropriate standards outlined in the Private Pilot ACS.

3.3.10 Lesson 25 – TD

3.3.10.1 Equipment

AATD/FTD

3.3.10.2 Lesson Objective

This lesson provides a review and introduction of emergency and abnormal procedures through the use of simulated situations in the appropriate flight training devices.

3.3.10.4 Completion Standards

At the completion of this lesson, the student will have gained proficiency in emergency and abnormal procedures with respect for the Private Pilot Airman Certification Standards (ACS). During the postflight debrief, the student will be assigned specific tasks to prepare for the next flight activity.

3.3.11 Lesson 26 – DXCN

3.3.11.1 Equipment

S.E. AIRPLANE

3.3.11.2 Lesson Objective

During this lesson the student learns to perform VFR night navigation competently. Emphasis is placed on the importance of proper planning and accurate navigation. The student will plan and execute a night VFR cross country flight of more than 100 nm total distance to an airport more than 50 nm away from the point of origin. Situations requiring the student to execute emergency/abnormal procedures may be presented by the Flight Instructor at any time during the lesson.

3.3.11.4 Completion Standards

The student will demonstrate a thorough understanding of night cross-country planning, flight procedures and precautions. Navigation should be accurate and simulated emergency situations handled promptly, utilizing proper judgment. This flight must be more than 100 nm total distance. This lesson must include at least five (5) takeoffs and landings to a full stop that are performed safely and without instructor assistance. At the completion of this lesson, the student must have logged at least ten (10) takeoffs and landings to a full stop at night (with each landing involving a flight in the traffic pattern) at an airport, 3.0 hours of dual cross-country flight training, and 3.0 hours of night flight. All tasks will be held to the Private Pilot ACS.

3.3.12 Lesson 27 – DL

3.3.12.1 Equipment

S.E. AIRPLANE

3.3.12.2 Lesson Objective

During this lesson the student will practice short and soft-field takeoffs and landings to gain proficiency and confidence. Situations requiring the student to execute emergency/abnormal procedures may be presented by the Flight Instructor at any time during the lesson.

3.3.12.3 Lesson Content

3.3.12.4 Completion Standards

The student will perform short and soft-field takeoffs and landings safely while maintaining directional control. Airspeed during takeoff and landings will be within +10/-5 knots of the target airspeed and -0 to +400 feet of the specified touchdown point. The student will demonstrate knowledge of the correct recovery techniques from unusual attitudes.

3.3.13 Lesson 28 – GB

3.3.13.1 Equipment

Briefing Room

3.3.13.2 Lesson Objective

During this lesson the student will prepare for the stage II check. The student will also be required to complete the pre-solo aeronautical exam during this ground brief.

3.3.13.3 Lesson Content

Oral Certificates and Documents Performance and Limitations Airworthiness Requirements Airworthiness Maintenance Logbook Human Factors Operation of Systems VFR Cross Country Flight Planning National Airspace System	 Review Review Review Review Review Review Review Review
Pre-Solo Aeronautical Knowledge Exam Pre-Solo Aeronautical Knowledge Exam	 Administer/Grade/Review
Additional Areas As Assigned by Instructor (If Necessary)	

3.3.13.4 Completion Standards

At the completion of this lesson the student will have knowledge of the tasks that meets or exceeds the desired outcome level listed above with respect to the Private Pilot Airman Certification Standards. Additionally this lesson will not be completed until the student has successfully completed the pre-solo aeronautical knowledge exam on the areas outlined in regulation **61.87 (b)**. At the conclusion of the test, the questions must be reviewed and all incorrect answers corrected with the instructor and student.

3.3.14 Lesson 29 – DXC

3.3.14.1 Equipment

S.E. AIRPLANE

3.3.14.2 Lesson Objective

The student must demonstrate the ability to safely conduct a solo cross-country flight, as well as demonstrate proficiency within the tasks listed below. The student will use an E6B or applicable tools to determine time speed and distance to waypoints in order to arrive and accurately land at a destination more than **50 nm away**. The instructor should emphasize the proper technique for safely exiting, entering and operating in the traffic pattern with attention to radio communications and collision avoidance. Emphasis should also be placed on ground operations including but not limited to refueling. Situations requiring the student to execute emergency/abnormal procedures may be presented by the Flight Instructor at any time during the lesson.

3.3.16.4 Completion Standards

The student will demonstrate the ability to safely conduct a solo cross-country flight. The standards for this lesson will be conducted in accordance with the Private Pilot (ACS). Additionally the student will exhibit increased SRM skills in all areas. During the postflight debrief, the student will be assigned specific tasks to prepare for the next flight activity.

3.4 Stage 3

3.4.1 Stage Objective

During this stage the student will conduct all the solo flight requirements. The student will also receive instruction in preparation for the end-of-course check.

The student will conduct training in the following equipment as applicable:

a. Technical Advanced Airplane
b. Single Engine Airplane-Land

3.4.2 Stage Completion Standards

The student will demonstrate proficiency to the standard of performance outlined in the current FAA Private Pilot Airman Certification Standards.

3.4.3 Lesson 32 – DSL

3.4.3.1 Equipment

S.E. AIRPLANE

3.4.3.2 Lesson Objective

This lesson provides an introduction to solo flight operations and a review of traffic pattern operations, and Normal and/or Crosswind Takeoffs and landings. After demonstrating to the Flight Instructor at least 3 Normal and/or Crosswind Takeoffs and landings, the student will continue the flight as the sole occupant of the aircraft.

ALL landings on this lesson will be concluded with FULL STOP TAXI BACK procedures.

3.4.10.4 Completion Standards

At the completion of this lesson, the student must have logged more than 10 hours of solo flight and 5 hours of solo cross country flight. At no time will safety of the flight be in question. During the postflight debrief, the student will be assigned specific tasks to prepare for the next flight activity.

3.4.11 Lesson 37 – GB

3.4.11.1 Equipment

Briefing Room

3.4.11.2 Lesson Objective

This lesson provides a review of the private pilot knowledge test, preflight preparation, and any additional areas assigned by the instructor in preparation for end-of-course lesson.

3.4.11.3 Lesson Content

Training Records	
Review of Training Folder	Review
Verify/Update Manuals	Review
Verify/Update Publications	Review
Private Pilot Knowledge Test Review
